UKCA/CE Marking – EN 1090-1

UKCA/CE Marking for steel and aluminium fabricators and processors

The construction industry has faced one of the most significant changes for a decade as EN 1090-1 UKCA/CE Marking of construction products become mandatory in all Member states throughout the European Union.

As our organisation is involved in the manufacture of structural metal components or kits, we are required to demonstrate that the construction product complies with BS EN 1090-1 through the implementation of a Factory Production Control system and third-party assessment of our system by an Approved Body.

As from the 01 July 2014 it has been a criminal offence to supply and trade structural metalwork on the market unless it adheres EN 1090 standards and carries a legitimate UKCA/CE mark.

As of the 30th June 2025 products placed on the market within England Scotland and Wales will require UKCA marking in place of CE marking, products placed on the market in Northern Ireland will require UKNI and CE Marking.

Mercia are BS EN 1090-2 certified to execution Class 2.

Certification to EN 1090-1, EN 1090-2 enables Mercia Architectural to manufacture, fabricate and install projects for residential, commercial and agricultural properties along with many other projects, within the UK market place.

Directors Signature

A handwritten signature in black ink, appearing to read "D. Halland".
